

Styrene butadiene rubber(ABS)

Styrene-butadiene rubber (SBR) is a synthetic rubber that is derived from styrene and butadiene. It is a versatile material that is used in a wide range of applications, including the production of tires, footwear, adhesives, and many other products. SBR is a type of elastomer that has excellent abrasion resistance and good aging stability

SOME OF THE MAIN USES:

- production of adhesives and sealants
- production of latex products such as gloves and balloons
- production of asphalt modifiers for road construction
- production of paper coatings.
- production of chewing gum base
- production of foam rubber products such as mattresses and cushions
- production of electrical insulation materials
- production of hoses and tubing for industrial applications
- PRODUCTION OF GASKETS AND SEALS FOR AUTOMOTIVE APPLICATIONS
